## 870 Style

A = height from floor to chimney connection upwards
$A=$ height from floor to chimney connection upwards
$B=$ height from floor to $c / c$ chimney connection rear
$\mathrm{C}=$ height from floor to air inlet
$D=$ height from floor to lower edge of hatc
$E=$ minimum height to sloped ceiling from the centre of the chimney

* If the stove is placed on a floor protector hearth plate made of glass for example (accessory option), the height from the floor will be increased by the
thickness of the hearth plate; for a freestanding glass hearth plate this will be 10 mm .
** To prevent discolouration of painted non-combustible walls, we recommend the same safety spacing as for a combustible wall.
